The future of innovation studies

Professor Mark Dodgson  Professor David Gann
Director, Technology and Innovation  Head, Innovation and Entrepreneurship Group
Management Centre  Imperial College London
University of Queensland  

In this presentation we discuss why innovation studies is important and how thinking about the innovation process has changed over time. We consider three major current research interests in innovation studies: complexity, openness and technologies that intensify the innovation process. The seminar will discuss how one large innovation research group at Imperial College London has developed the strategy and structure to respond to the new research challenges in the field. It concludes with a suggested future research agenda.
